

The Digestive System

Across

1. I am the mixture your stomach makes once it has digested the food you eat.
5. This is the process your body does of breaking down your food so you can take it in for energy to grow strong and healthy.
8. I am the part of the digestive tract that is too short in kids with short bowel syndrome.

Down

2. I am the first step in the digestive process where your teeth chomp down on food.
3. I am the organ that is usually yellow in color and makes many special substances, called enzymes, that help in digestion.
4. I am the special substance the pancreas makes that helps control the levels of sugar in your blood.
6. I am the organ that helps to clean your blood and produces bile to help with digestion.
7. I am the last part of the digestive tract that is important for absorbing the remaining fluids you drink.
